There is no doubt that electronic marketing has contributed positively in the life of modern societies, mainly the consuming societies. It allowed purchasing of materials cheaply without any limit, and without any restrictions. It also gave the chance to make a free selection and comparison between the prices of goods at the electronic department stores throughout the Internet. All such facilities are given to the consumers in a very short time without causing them to leave their office or home. In addition, the Electronic Marketing has exterminated the monopoly of goods and materials, all such acts of course are for the consumer's benefit. However, in addition to such advantages there are many disadvantages of such type of marketing; the Electronic Marketing has deleted the privacy of the consumer, because all of his movements through the Internet have been divulged and under control, in addition to lack of exclusive security through the Internet. Accordingly, many losses equally occurred to the customer and the merchant due to such acts of hackers who reveal the information and credit cards details. In addition, the Electronic Marketing caused many merchants, agents and monopolists to be vanquished because it gave the chance for direct communications between the producer and the consumer without passing through them; as such, many
of such merchants have been yielded away from the way of this new technology. The Electronic Marketing was able to cause an upset down in many concepts and standards of economic science that have existed for so many years. Doors are still open for every new in this assumption and endless world as there are no limits that can stop such human ambition.

Quality accreditation in higher education institutions (HEIs) is currently a buzzword. The need to maintain high-quality education standards is a critical requirement for HEIs to remain competitive in the market and for government and regulatory bodies to ensure the quality standards of programs offered. From being an implicit requirement that is internally addressed, quality assurance activities become an explicit requirement that is regularly audited and appraised by national and international accreditation agencies. HEIs are voluntarily integrating quality management systems (QMS), institutional and program-specific, in response to the political and competitive environment in which it exists. Through its higher education department or by creating non-profitable accreditation bodies, many governments have implemented a quality framework for
licensing HEIs and invigilates its adherence based on which accreditation statuses are granted for HEIs. Global Perspectives on Quality Assurance and Accreditation in Higher Education Institutions provides a comprehensive framework for HEIs to address quality assurance and quality accreditation requirements and serves as a practical tool to develop and deploy well-defined quality management systems in higher education. The book focuses on the critical aspects of quality assurance; the need to develop a concise and agile vision, mission, values, and graduate attributes; and to develop a system that effectively aligns the various activities of the HEI to the attainment of the strategic priorities listed in the institutional plans. The chapters each cover the various facets of the quality assurance framework and accreditation agencies' requirements with practical examples of each. This book is useful for HEI administrators, quality assurance specialists in HEIs, heads of academic departments, internal auditors, external auditors, and other practitioners of quality, along with stakeholders, researchers, academicians, and students interested in quality assurance and accreditation in higher education.

Seminar paper from the year 2012 in the subject Business economics - Personnel and Organisation, grade: A, University of Cambridge, language: English, abstract: The application of traditional recruitment techniques do not suffice anymore and are also not well-timed in order to bring in satisfactory pool of competent candidates. Through early-1990s, with the progression associated with online technologies, many have experienced the particular shift for the traditional recruitment techniques to e-recruitment. The web-based recruitment blends software programs as well as infrastructure, in addition to resume repositories which assist the particular clients in their recruitment operations. Internet lookups are actually very popular among the people looking for work. Resumes delivered via the web as well as through e-mail could be scanned to get key phrases, determining essential information, abilities, proficiency, as well as working experience, hence lowering hands-on procession and probable mistakes. This elevates the effectiveness around choosing competent as well as a trustworthy workforce, lowers long term turnover, and recruits completing online documents presumptively use much less resources compared to that that post papers application packages. Companies can access job hunters spanning the planet and usually get far more applications. The process is cheaper for companies and also more expedited. Even though career boards have the ability to deal with extremely high quantities of both people looking for work as well as employers, they tend to not achieve high quality. The systems are not simple and also harmless enough to be made use of by comparatively unskilled end users; they lack a ‘personal feel’, raise confidentiality, security, authentication, and cheating issues. The systems additionally discriminate against some applicants due to badly developed hiring platforms. Integration of e-recruiting with convectional recruiting may also be challenging and globalization further complicates assessment for applicants across borders.

Fiction. In English translation. Guatemalan diplomat and writer Miguel Angel Asturias (1899-1974) began this award-winning work while still a law student. It is a story of a ruthless dictator and his schemes to dispose of a political adversary in an unnamed Latin American country usually identified as Guatemala. The book has been acclaimed for portraying both a totalitarian government and its damaging psychological effects. Drawing from his experiences as a journalist writing under repressive conditions, Asturias employs such literary devices as satire to convey the governments transgressions and surrealistic dream sequences to demonstrate the police states impact on the individual psyche. Asturias's stance against all forms of injustice in Guatemala caused critics to view the author as a compassionate spokesperson for the oppressed. My work, Asturias promised when he accepted the Nobel Prize for Literature, will continue to reflect the voice of the people, gathering their myths and popular beliefs and at the same time seeking to give birth to a universal consciousness of Latin American problems.
